

TRIC[®] HC14

The TRIC HC14 is the product of years of field testing various hydraulic power-pack configurations with our lateral bursting systems to maximize convenience, efficiency, and reliability on the job. The HC14 delivers over five times the speed of previous pumps used with earlier TRIC equipment. Recent improvements include heavy-duty wheels and frame, double-acting handles for extra portability in difficult field situations, a wireless remote control, and a special circuit to power hydraulic tools such as jack-hammers, trash pumps, and concrete saws. Together, the HC14 and the new X30 puller comprise the heart of the fastest, lightest, most efficient lateral pipebursting system ever devised.

- Hydraulics:** 8 GPM–2 GPM; 0–6,000 psi variable displacement piston pump
- Reservoir:** 10 gallons
- Fuel Tank:** 1.9 gallons
- Engine:** Kohler Command Pro 14HP
- Weight:** 395 pounds wet
- Dimensions:** 32" H, 33" W, 34" L (handles retracted)
